

Enterprises need complete visibility into every layer of their AWS environment, plus reliable tools and services to counter low-risk to high-risk issues.

Experience the dependability of the Sycomp + Orca Security partnered solution. As an aligned partner with AWS Built-In (ABI) strategies, Orca Security provides a single, agentless platform with 100% visibility into your entire cloud estate. Once turned on, your environment is backed by Sycomp's remediation support to rapidly mitigate and manage identified risks and continue to harden your environment to raise your security score.

Detect and Prioritize Risk with the Orca Cloud Security Platform for AWS

The Orca Cloud Security Platform earned the AWS Built-In (ABI) Competency in collaboration with AWS engineers due to their integrative nature with AWS Native Services across key foundational cloud domains. With a rapid deployment that scans and detects risks in just minutes, the Orca Cloud Security Platform provides comprehensive security and compliance coverage for AWS, detecting vulnerabilities, misconfigurations, lateral movement, API risks, sensitive data at risk, anomalous events and behaviors, and overly permissive identities without the gaps in coverage, alert fatigue, and operational costs of agent-based solutions.

Orca Security for AWS enables:

Cloud Security Posture Management (CSPM)

Vulnerability Management

Cloud Detection & Response

Cloud Workload Protection (CWPP)

Container and Kubernetes Security

Compliance Management

Cloud Infrastructure Entitlement Management (CIEM)

Data Security Posture Management (DSPM)

AI Security Posture Management (AI-SPM)

API Security

Detect, Prioritize and Remediate Security Risks in Your AWS Environment

Remediate and Optimize AWS Environments with Sycomp's Intelligent Cloud+ Solutions

Optimizing AWS environments starts with Sycomp's proven Well Architected Framework Review which includes deployment of the Orca Security assessment for complete visibility of your cloud estate, as well as a key risk finding report and a one-on-one with a Sycomp cloud security expert.

Using Orca Security's output, Sycomp's architects create a plan to act on untapped opportunities for:

Cost optimization

Improved application performance

Remediation and mitigation of risk

As a member of the AWS Consulting Partner and AWS Well-Architected Partner Programs (WAPP), Sycomp's technical team of cloud architects and engineers are certified experts in eliminating the risk and complexity of adopting and managing AWS environments. Our flexible and competitive engineer services provide best practices based on AWS' Well-Architected Framework (WAFR) for continued, comprehensive evaluations of AWS workloads, potential issues and improvement progress.

As an added benefit, under the WAFR partner program, Sycomp can submit for AWS funding to off-set cloud remediation services' costs.

Added Value of Well-Architected Framework Review (WAFR) with Sycomp

- Sycomp uses the WAFR concepts, design principles and architectural best practices to optimize AWS usage.
- Using Orca Security's reporting output, Sycomp layers on a plan to take advantage of untapped opportunities for cost optimization, improve application performance, and mitigate risk.
- Sycomp can submit funding requests to AWS to off-set remediation services' costs under the WAFR program.

About Sycomp

Sycomp is a global IT services and logistics provider with extensive expertise in cloud, data center, endpoint management and security solutions. Sycomp's diverse team of consultants and engineers deliver on the company's mission to tackle challenging global IT projects through its state-of-the-art integration and warehouse centers and global technology partnerships. Headquartered in the heart of Silicon Valley, California, Sycomp has successfully shipped, deployed and managed complex IT projects and supporting assets in more than 150 countries helping its Fortune 500 customers and global partners realize a world without boundaries. Visit sycomp.com for more information.
